

The graph displays the frequency of words of different lengths for ten languages. The x-axis represents word length from 1 to 15, and the y-axis represents frequency from 0 to 100. The legend identifies the languages by color: Chinese (dark red), Korean (red), Arabic (orange), German (light orange), Polish (yellow), Russian (light green), Turkish (green), English (teal), Finnish (blue), and French (purple). Chinese and Korean exhibit a very high frequency of single-letter words, peaking near 100. Most other languages show a primary peak at length 2 or 3, with frequencies generally below 30. The distributions for most languages are unimodal and right-skewed, tapering off as word length increases.
